

PROFESSIONAL TRACKING & TRACING

The internet based backend software CarLoc® PORTAL combines efficient fleet and transport management with the benefits of a well-designed and straightforward operation.

It's the first system worldwide that allows a smooth, uniform management of all traffic carriers- from a few vans or multiple trains up to the largest fleets of containers.

OVERVIEW

Important data such as time and position, asset status, cooling temperature etc. are presented in well arranged charts. The digital map is state of the art:

- Fast, precise, periodically updated
- Trace of several assets for chosen time range
- Map for large format screens with moving map function
- Automatically routed geo-zones to inform if an asset leaves planned route

AUTOMATED DATA EVALUATION

CarLoc® units provide driving time distance or time at location information. Units can furthermore be connected to existing sensors. Sensor data is processed into customized information by CarLoc® sensor profiles.

The integrated alarm-function reports any incidents automatically via SMS and e-mail.

REPORTS

In order to take the right decisions companies need reliable facts. CarLoc® reports provide the relevant information.

Daily reports including map segments, fuel consumption statistics, temperature profiles and much more provide an analysis of fleet efficiency, number of transport-turns or staff allocations.

Scheduled reports or reports that are triggered by a setup of customer specific criteria are automatically sent by e-mail.

FLEXIBLE ADMINISTRATION

Organize users, asset assignments and transport management according to your established structures. CarLoc® PORTAL supports:

- Assignment of asset groups to personnel, departments or customers.
- Subdivision of affiliates and customers into clients and sub-clients.
- Different user access levels.
- Selective transmission of information, alarms and reports to persons in charge, departments and customers.

CONVENIENT

Each user has his individual needs for information display and usage. The CarLoc user interface can be set-up according to personal preferences of each user.

- Default display after login
- Selection of assets and data
- Sequence, size and sorting of table columns can be configured as easy as with a local application.
- Just work – no training required

NO INSTALLATION REQUIRED

Only an internet connection is required to access the system and to let your affiliates take benefits – worldwide. Use CarLoc® Portal...

- as a self-contained information, dispatching and monitoring system
- for automated data collection for your existing ERP system
- fully integrated into your order processing or time table management system.

FELA – YOUR STRONG PARTNER

FELA Management AG has pioneered in traffic telematics systems. The family-owned enterprise has been a close and trustworthy partner to its customers for more than 4 decades.

The CarLoc® system is offered by FELA as a well-proven standard solution for efficient fleet, transport and security management.
